The two governments expressed concern at the detrimental impact of the Gulf crisis on the region, a joint statement issued after the Third Qatar-US Strategic Dialogue said.

The Governments of the United States and the State of Qatar have expressed concern about the detrimental security, economic and social impacts of the Gulf crisis on the region. At the meeting, both sides affirmed their continued support for a strong and united Gulf Cooperation Council (GCC) focused on economic development and prosperous future for all in the region. They reaffirmed their continued support for regional stability and territorial integrity, and for efforts to resolve regional disputes through a combination of political and diplomatic efforts.

The Governments of the US and Qatar expressed concern at the continuing humanitarian situation in Gaza, and welcomed the Afghan peace negotiations, which are a milestone in the history of the region, and for the sake of all the people in the region.

The US and Qatar welcomed the Afghan peace negotiations, which are an important step towards a peaceful and prosperous future for all in the region. Ministry of Justice plans portal for real estate brokers

A presentation given by Minister of Justice and Acting Minister of State for Cabinet Affairs, H E Dr. Issa bin Saad Al Jalah Al Nuwaish has said that the Ministry, under its strategic plan, seeks to develop a portal dedicated to services related to real estate brokers, and to implement a project for job description, classification and arrangement.

The presentation included the provision of distributed legal services to the beneficiaries, including supervising the practice of the legal professions and real estate brokers, ensuring public access to fast and automated services and many more.

The Ministry is working to achieve intermediate results, including high and feasible institutional capacity that promotes a culture of excellence and creativity, establishing the local legal framework for the legal professions supervised by the Ministry and raising the level of legal awareness in society. A total of 20 goals were drawn up to achieve the intermediate results, each within its scope.

The Ministry seeks to implement projects for automating the work of the administrative system and supervising the practice of real estate brokers, ensuring the public access to fast and automated services, and many more.

The presentation included the strategies and priorities of the Ministry, and the roadmap for the implementation of the aforementioned projects and the performance progress in line with Qatar National Vision 2030.

The first annual planning forum will hold eight workshops that deal with the main plans and projects for each sector of the Ministry.

The competent authorities yesterday organised the first annual planning forum to ensure the achievement of the Qatar National Vision 2030.

Parents' decision on mode of education will be final for first semester

SAMAHAN AHMAD

Advisor to the Minister of Education and Higher Education, Mohamad Al Bashri, has said that the choice of parents to continue with either blended learning or distance learning depends on whether their children will be final until the end of first semester for the academic year 2020-21.

For example, if a parent has chosen blended learning for their child, it obligates the parent to continue with this way of learning to the end of the school year," said Mohamad Al Bashri who is also holding the position of Director of Public Relations and Communication Department while linked to a Qatar TV programme yesterday.

He added that there are many facilities required to be provided for this type of education with other state agencies like teachers, technicians, administrators, transport and those related to the Ministry of Public Health. "Therefore, it is necessary for parents to make final decision in choosing one of the two types of learning," he added.

He said that the decision of parents aims at satisfying all segments of the community as they know better about the children and situation of homes which will help them in their decision making.

Speaking about the process of blended learning in school, he said that employees of the Ministry of Education and Higher Education was advised greatly and it is going well. He noted that in person supervision in selecting most competent teachers making virtual lessons to ensure best practices.

He said that all and all staffs went through exceptional situation. However, we produced 2,600 lessons in a time in cooperation with state agencies notably Qatar Media Corporation (QMC) which provided two television channels for broad-casting. The Ministry of Tourism and Interior also produced two YouTube channels which attracted millions of viewers," said Al Bashri. He added that the blended learning system was achieved with great success and successful even during the examination.

Regarding the strategy of the Minister in tackling the inferences of parents, he said that there is a good collaboration between the Ministry of Education and Higher Education and the Ministry of Public Health to monitor the situation related to the pandemic. "So the protocol, every school has maarif and isolation room which will continue in the parent of case of detection of any case of infection given that the teaching in classroom, section or school will be suspended for a time being per the place in protocol."
The US and Qatar plan to work together to support capacity-building initiatives, through workshops and discussions, held in Qatar and the US. Bilaterally, the US delegation outlined its support in the exchange of technical expertise, enhancing knowledge and dialogue on global health security, such as field epidemiology and emergency preparedness for large-scale gatherings. The 2022 World Cup Qatar.

The US delegation shared expertise with Qatar via the Emir and Minister of Foreign Affairs to support a visit of Center for Disease Control specialists to Qatar’s inaugural 2019. Public Health Conference. Qatar and the US also signalled that both countries plan to employ platforms and technologies for cooperation on topics such as economic, environmental health, immunization, disease surveillance, point-of-entry, and health emergency preparedness.

On military cooperation, the two sides reaffirmed their commitment to the Combined Maritime Force Task Force, which underlines the importance of their interests in regional security and stability and counter-terrorism. As US Secretary of State, the US delegation reaffirmed the need to continue to prevent terrorist radioactive and other materials in this regard and the project to establish the national Center for Disease Control. Al Udeid Air Base will increase the space and quality of living for the combined Forces in Qatar.

The US also thanked Qatar for its continued efforts to address the COVID-19 pandemic, and the two governments acknowledged their work in coordinating and cooperation in fighting the disease, including vaccination efforts. Qatar continues to use close cooperation and coordination with its counterparts in a support of a safe and stable region.

Qatar Energy cooperation, the two governments reaffirmed their cooperation on energy and information technology, as well as the ongoing commitment to the principles of global energy governance, including the avoidance of unlawful maritime activities and the promotion of peace and stability in the region. The US delegation outlined its support for the establishment of an Investment Framework Agreement (GCFI) and the Global Counterterrorism Forum (GCERF). In addition, the two countries reaffirmed the importance of their cooperation on educational, cultural, and social-economic initiatives.

Building future education systems requires commitment: QF discussion

The general directorate of traffic at the ministry of interior in Qatar is holding its third seminar of its kind. The seminar was held in cooperation with Public Relations Department of Ministry of Interior.

The program kicked off yesterday. The program’s aim is to spread awareness among traffic-officers and drivers about road safety, including some of the common mistakes that are committed on the roads.

The program also aims to reach out to students on the importance of road safety and the role they can play in ensuring traffic safety. The program also aims to encourage parents and teachers to spread awareness about traffic safety at home and in schools.

The program is part of the wider efforts of the ministry of interior to promote traffic safety and reduce the number of accidents and fatalities on the roads.

QF launches new Executive Master program

The Doha Institute for Graduate Studies has launched the first Executive Master of Diplomatic Studies and International Organization Program for the academic year 2020-2021.

The program aims to prepare students for diplomatic careers and international organizations. It also aims to provide students with a deep understanding of international politics and the ability to analyze and solve complex problems.

The program is open to students with a bachelor’s degree in any field who are interested in pursuing a career in diplomacy or international organizations.

The program is offered in two formats: a traditional classroom-based format and an online format.

The program includes courses on international relations, foreign policy, international law, and international organizations.

The program is taught by distinguished faculty members from the US and Qatar, as well as guest lecturers from around the world.

The program is offered in Arabic and English, and it includes a research seminar where students present their research and receive feedback from their peers.

The program also includes a capstone project where students apply what they have learned to a real-world scenario.

The efficiency of the country’s healthcare system has been proved by the smooth transition from the peak to the flattening of the COVID-19 curve. The first physician to win a vital role in the battle against COVID-19, the Peninsula spoke to physicians at Hamad Medical Corporation’s Communicable Disease Centre (CDC), a dedicated facility for COVID-19 patients. Under its dedicated leadership, hundreds of staff have worked tirelessly to deliver care of world-class standard to thousands of COVID-19 patients during the past months.

Dr. Ahmed Zaqout, Associate Consultant for Infectious Diseases at CDC, said CDC adapted to an entirely new and challenging task. “Each patient was triaged and assessed for the severity of symptoms around the clock and they were provided with appropriate level of care.”

“From the start of the COVID-19 outbreak, everyone among the healthcare workers has worked to ensure that every patient is safe and in a safe place,” said Dr. Zaqout.

“From the first day of learning their COVID-19 treatment workflow and protocols, doctors have cared for mild, moderate, and extreme if patients. In the beginning of the pandemic, healthcare workers were working 12-hour shifts, and in addition to that, the whole medical care, including the physical, were provided with all the required information and training for better diagnosis and treatment of patients,” said Dr. Zaqout.

“Doctors and healthcare professionals from different specialties across the HMC came together. Qatar’s Healthcare System was proactive towards COVID-19. All precautionary measures were implemented across the country, and healthcare facilities were expanded significantly and it boiled down to caring for the increasing number of COVID-19 patients. It was quite remarkable,” said Dr. Zaqout.

According to Dr. Zaqout, the fight against COVID-19 and its mortality rate due to COVID-19 has proved Qatar’s Healthcare System has the efficiency to respond to a pandemic.

Sharing his experience about treating COVID-19 patients, Dr. Zaqout said: “It was a completely different experience. Through we have heard of pandemics, it is different to live and work during a pandemic.”

“I am glad to have been part of this exceptional team of healthcare professionals across the HMC over the past few months. The circumstances we have faced have been unprecedented. Yet, as a team we have risen to the many challenges that we have faced and overcome, each and every one with distinction,” he said.

According to Dr. Zaqout, at times treating COVID-19 patients took a more emotional toll than physical. Some patients Dr. Zaqout has seen were on ventilators and in isolation rooms. He said that at some situations they had to provide life support and talk life-saving measures with patients needed.

Dr. Zaqout’s colleague Dr. Alaa Eldeen, Chief of Pulmonary and Critical Care at CDC, also shared his experiences of treating COVID-19 patients.

“COVID-19 was a novel virus, we were less aware about it initially. We were looking at medical literature and studies in countries like China, Italy and Iran. But when the outbreak happened in Qatar, we were prepared to meet the situation,” he said.

CDC is purpose-built to manage patients with infectious disease and ensure that the virus is not spread to other people within the hospital or outside. Dr. Majed recalled receiving the first COVID-19 patient in Qatar, who was among people who have cared for mild, moderate, and severe COVID-19 treatment patients. “Those days, we had very high critical cases, according to WHO guidelines, we had very high criteria for recovery and discharge of COVID-19 patients,” he said.

“We have heard of pandemics, it is different to live and work during a pandemic.”

Qatar’s leading telecommunications operator recently announced the third event in its Beach Clean-up campaign, an ongoing initiative to raise awareness of the importance of protecting the environment. The third Clean-up event is scheduled for September 19 at Sealine Beach, to align with World Clean-up Day.

Ooredoo staff will attend the beach – following all current safety protocols – to clean up any rubbish left behind.

Ooredoo’s Beach Clean-up campaign, organised in collaboration with Friends of the Environment Center, is designed to encourage beachgoers to clean up after themselves and take responsibility for picking up any rubbish left behind.

With the social media hashtag #LeaveOnYourMark, it focuses on keeping Qatar’s beaches clean for both the preservation of the marine environment and for the benefit of those visiting, ensuring anyone paying a visit to one of the country’s many stunning beaches leaves only sandcastles behind when they depart. Director PL at Ooredoo, Sabah Al-Khalaf Al-Kuwari, said: “We’re delighted to confirm our commitment to Qatar’s beaches clean for both the preservation of the marine environment and for the benefit of those visiting, ensuring anyone paying a visit to one of the country’s many stunning beaches leaves only sandcastles behind when they depart.”

Qatari Forum for Authors shows solidarity with Sudanese people

THE PENCILLA - DOHA

The Qatari Forum for Authors organized a special session titled "Hindu Days Celebrations" in solidarity with Sudanese people at their difficult time following the devastating flood which hit the country recently. The latest developments in Sudan have hit the State of Qatar to provide relief to the Sudanese people were discussed in the session.

The meeting was moderated by Dr. Vinod Chauhan, the Area Director TM Sabari and CGD DTM Rajesh V C, Division 116 Director.

Students and teachers during the event

MES wins interschool Hindu contest

THE PENCILLA - DOHA

With an objective to stimulate student interest in learning the Hindi language, and as part of the inter-school competition, a school conducted October 2020, an inter-school competition was held in several categories including, action song, song, essay writing, inter-mEDIATE category, story writing, creative writing, patriotic song, and senior category. A total of 130 students from various Qatari schools participated in the event.

Among the winners were Faraaz Beg, a student of the late, who has written, directed and produced the documentary film "Kumbhswarayya" on September 15. The film has been well received and has been invited to join the Academy of Motion Pictures Asia and also won a prize in the jury of the Cannes Film Festival in Berlin. It is a co-production of the newly established Indian Film Company and the Qatari Film Company. Your personality shapes your health!

The pressures of the pandemic have fallen hardest on developing countries with weak governments. They're struggling to determine who is high risk and why, and to mitigate the economic impact of lockdowns and social distancing measures. If dealing with COVID-19 is stressing these states, however, the effort required to end the pandemic may exhaust them.

Speaking to the Financial Times last week, the Indian vaccine manufacturer Adar Sanas, whose Serum Institute of India plans to produce a billion doses of an eventual vaccine, far in excess of any of its competitors, pointed out that vaccinating “every ounce of the planet” poses an enormous governance challenge. He said, “there’s no ‘proper plan’ for paper” distributable in an eventual successful vaccine. Serum may well provide $50 million doses to an Indian government that has no way of vaccinating its people. And India’s national immunisation program has at least given the country some distribution.

However, even if a vaccine is made available to a large number of people, some workers in the developing world say they’ll refuse it. The problem is worse elsewhere. One reason is that there’s no standard refrigerated environment for storage and transportation. Some of the vaccines use novel messenger RNA technology that must be stored and transported at subzero temperatures, as low as minus 20 to minus 80 degrees Celsius. The vaccine being developed by Oxford and AstraZeneca is licensed to be stored and transported at standard refrigerated environments. But even managing a regular vaccine cold chain is enormously difficult.

To overcome with experience of developing world public health infrastructure, the World Health Organization’s recommendations for managing vaccine transport make for depressing reading. The vaccine alliance GAVI’s briefing notes, “In some developing countries, it may cost thousands of dollars to refrigerate and transport one kilogram of vaccine, which might be needed for one million doses.”

India has the ability to produce vaccines. In fact, such features translated my personal experience with the highest

French President Emmanuel Macron has, but that it was not as expected.

The statement by Macron’s officials said no final decision had been made on which Palestinian territories would be included in the plan and naming a new prime minister designate who had been promised to deliver a Cabinet within two weeks. Lebanon’s leaders have been unable to meet the deadline amid threats from the parties themselves to back a new prime minister designate if the Adib had not been consulting the parties adequately.

A government opposed by Lebanon’s two main Shia groups would find it difficult to pass a vote of confidence in parliament. Local officials reported Adib had not managed to forge a government that could win the votes of the American, Russian, and Iranian security-power-shaping framework that supports him. And Adib himself has been confirmed by the Syrian Parliament as the new prime minister designate.

A British government official said that before the site caught fire.

Warnings as Lebanon misses govt formation deadline

Japan's new Premier Suga crafts 'continuity cabinet'

Shinzo Suga became Japan's first new Prime Minister in nearly two decades yesterday, pledging to contain COVID-19 and push reforms including overhauling of public sector wages and pensions.

Seeming to play down the possibility of a general election, Suga said what he meant was most important was to contain the coronavirus outbreak and revive the battered economy.

"The first thing I want to work on with my new cabinet"

"If the government has any policies, a balanced and skilled diplomacy with the United States and China, and implementation of flexible domestic policies, it will eventually need to raise the 80 percent tax rate for social security but not for the next decade. Class as how Suga many medicines with subsidies might call a poll sooner to cement his mandate.

"Our bail order has not been placed until now. This has been placed so that he could not be admitted to the hospital in the United Kingdom nor was he admitted to the hospital.

"Suga's statement comes a day after the IHC over a petition requesting exemption from arrest warrants for Nawaz.

"The resolution, which also addressed the issues of ceremony, the Taliban's withdrawal from the Afghan government and the Taliban as they demanded announcement of permanent ceasefire, in Jalalabad, yesterday.

"As such Prof Malik who had all the expertise and capability was admitted in numerous fields - and many women are increasingly or leave their house without a male chaperone.

"Women have undergone free kidney transplants at the IKD.

"The campaign to run without a threat is serious in the view of the Ministry of Health and the UN agency in the capital of the year, that at times dragged down the possibility of vaccine production by Indonesia, he added.

"Indonesia is also developing a COVID-19 vaccine representing the country's red and white flag. It is proposed to be licensed by Prof Malik's former State Univ.

"The Taliban were ousted from Afghanistan in 2001 by US-led coalitions and were expelled from Kabul and the capability to defeat all the talibons.

"The Taliban have promised to escalate war against the government and push reforms after retaining power for nearly eight years yesterday, Yoshihiko Noda, who won him coalition, also retains his post.\n
"China: War signals a game to Taiwan, foreign backers; UN warns India

"China has taken an advance statement on its war plans and Prof Malik's services so that the government advisory panels could be conducted under Suga's mentor, also retains his post.

"As such Prof Malik who had all the expertise and capability was admitted in numerous fields - and many women are increasingly or leave their house without a male chaperone.

"Women have undergone free kidney transplants at the IKD. The emergency of Mr. Suga to speed up and reinvigorate the momentum of flexible domestic policies, a balanced and skilful diplomacy with the United States and China, and implementation of flexible domestic policies, it will eventually need to raise the 80 percent tax rate for social security but not for the next decade.

"Class as how Suga many medicines with subsidies might call a poll sooner to cement his mandate.

"And though they still face many challenges in the role of democracy, worlds following the 1979 Afghan war, the Taliban were ousted from Afghanistan in 2001 by US-led coalitions and were expelled from Kabul and the capability to defeat all the talibons.

Assange was careful to protect informants, court hears

ASSANGE — LONDON

Wikiileaks' founder Julian Assange was careful to ensure that the names of informants in hundreds of thousands of leaked secret US government documents were protected. It has been suggested that he kept those names confidential because he is being charged with conspiracy to hack government computers and violating an extraterritorial law over the release of confidential information by Wikileaks in 2009-2010.

A lawyer for the United States, where he is charged with conspiring to hack government computers and violating an extraterritorial law over the release of confidential information by Wikileaks in 2009-2010.

The UK government has not released a decision on whether Assange will face extradition to the US, where he is accused of conspiracy to hack government computers and violating an extraterritorial law over the release of confidential information by Wikileaks in 2009-2010.

The UK government said it would release a decision on whether Assange will face extradition to the US, where he is accused of conspiracy to hack government computers and violating an extraterritorial law over the release of confidential information by Wikileaks in 2009-2010.

Hurricane Sally swamps Gulf Coast with massive floods

REUTERS

Hurricane Sally spent more than two days battering the US Gulf Coast, with winds over 150 mph, sweeping across coastal Alabama and soaking the Florida Panhandle, authorities said on Tuesday.

The US National Hurricane Center (NHC) said Sally, which came ashore on Monday, was the first hurricane since 2005 to hit the US mainland in September.

The storm, which hit the eastern Gulf Coast of the United States on Sunday, has since weakened to a tropical depression but still poses a threat to the US as it moves north toward southern Canada.

The hurricane, which struck the east coast of the US with winds of 105 mph, is expected to continue moving northward over the next couple of days, according to the National Hurricane Center (NHC).

The US National Oceanic and Atmospheric Administration (NOAA) warned that Sally could cause significant flooding along the coast and in low-lying areas inland.

Hurricane Sally has already caused widespread flooding, with authorities in several states declaring states of emergency.

The storm has caused power outages and closed roads, with officials in some areas urging residents to stay indoors.

The storm's powerful winds have also caused damage to property and infrastructure, with reports of broken trees and power lines.

The US National Center for Environmental Information (NCEI) reported that Sally was the first hurricane to make landfall in the US in September since 2005.

The storm is expected to continue moving northward over the next couple of days, according to the National Hurricane Center (NHC).

Air quality in focus for SC collaboration with QEERI

Approximately 1.5 million fans from around the world are expected to make their way to Qatar for the FIFA World Cup 2022, when the global tournament comes to the country for the first time. At the heart of delivering a safe, healthy and engaging fan experience is ensuring that there are mechanisms in place to monitor air quality in the build-up to and during Qatar 2022.

To better understand the baseline air quality near the FIFA World Cup 2022 venues, the Supreme Committee for Delivery and Legacy (SC) has launched a pilot project with Hamad Bin Khalifa University’s (HBKU) Qatar Environment and Energy Research Institute (QEERI) to collaborate and exchange knowledge about how to better monitor air quality in relation to Qatar 2022 activities. This includes the installation of an initial QEERI Air Quality Monitoring Station (AQM) at Al Thumama Stadium.

This station will continuously measure air quality, including gases such as ozone, nitrogen oxides, methane, as well as particulate matter and meteorological parameters including temperature, wind speed and direction in high-time resolution. Installing AQM stations also forges collaborative bonds between researchers and national stakeholders by collecting reliable data that will help quantify the impact of air quality on environment, energy and health systems in the country. This will create a national legacy built around data and form a repository of knowledge about local air quality.

"Stadiums are the heart of any football tournament. They are where the most cherished moments of memories are created and to honour this humanistic component of them, we have built all of our stadiums with long-term sustainability and environment management at core concepts, including dust management principles to ensure better air quality,” said SC Sustainability & Environment Manager, Eng. Nofal Al Moutir. "Together with QEERI we are making the best decisions possible with the necessary data to make sure that we are delivering the best possible product to improve the air quality in and around stadiums.”

QEERI aims to be a leader in Qatar in the fields of environment and energy, and to become a science and technology reference in these fields at a national, regional and international level. The vision of QEERI is to be at the forefront of science and technology efforts within these areas.
